# 1 Introduction / Abstract?

**\*\*Stylistically, I would prefer to do an abstract here and breakdown the concepts in the following section\*\***

## 2 Background and literature review

**\*\*start this off nicely with a diagram of the research gap\*\***

### 2.1 Parkinson's Disease

*Outline*

**\*\* 1. Loss of SNc dopaminergic neurons.\*\***

**\*\* would be nice if this had a diagram\*\*** **\*\* 2. Strengthening of indirect GPe → STN pathway, weakening of hyperdirect Cortex → STN pathway. (?dimmer switch model [Helmich et al., 2012], [West et al., 2022])\*\***

**\*\* 3. Hypersynchrony in the Basal Ganglia.\*\***

### 2.2 DBS: theory and practice

**\*\*DBS as the state of the art in treatment\*\***

**\*\*Limitations of DBS (invasiveness, side effects, it needs to be on permanently, why 130Hz? when tremors are ~ 20Hz)\*\***

⇒ plenty of things to be improved

### 2.3 Stimulating at the right time?

**\*\*important\*\*** [Cagnan et al., 2017] [West et al., 2022]

### 2.4 Plasticity to recover network states

**\*\*here I need to checkout some literature, ??how have I not done this already yet??\*\***

### 2.5 Mean-field vs. Single Neuron models

**\*\*briefly, in general and expand in the context of plasticity\*\***

**\*\*important\*\*** [Duchet et al., 2023] [Shupe and Fetz, 2021] [Schwab et al., 2020]

### 2.6 **\*\*Other ways of improving stimulation-based treatments\*\***

**\*\*stimulation parameter optimizations, closing the loop (e.g. aDBS [Beudel et al., 2018])\*\***

## 3 Project Plan

**Aims**

1. Model neuroplasticity in a Parkinsonian CGBT network

2. Investigate the viability of harnessing plasticity to remove the system from the pathological state and analyze the dynamics that follow

**\*\*here i care about things like for how long, how does the network change.\*\***

3. Try to link potential results to potential stimulation protocols?

**Methodolgy** **\*\*How indeed?\*\*** HH/IF Parkinsoni model + plasticity rules, trying different stimulation-based protocols (link with experimental data?)

### **3.1 Timeline**

**\*\*Gant chart thingy\*\***
